

Smart Guest Managements

Overview

A leading event planning company specializing in weddings, corporate events, and private celebrations wanted to modernize the way they managed guest experiences. As the scale of their events grew, coordinating hundreds of guests through phone calls, spreadsheets, and manual check-ins became increasingly time-consuming and inefficient.

The client needed a centralised digital platform that would provide real-time visibility into guest attendance, simplify communication, streamline check-ins, and help organisers track guest arrivals throughout the event. Their goal was to enhance the guest experience while enabling event teams to execute events more efficiently with greater control and visibility.

To address these challenges, a comprehensive Guest Management Platform was developed, empowering organisers with intelligent tools for attendance management, live communication, QR-based check-ins, guest categorization, and event scheduling all within a single, easy-to-use application.

Technology Details

Mobile Applications: Android & iOS

Backend: Secure Cloud APIs

Location Services: GPS & Geo-Location APIs

Maps: Interactive Map Integration

Real-Time Communication: In-App Event Chat

Authentication: Secure Login & Role-Based Access

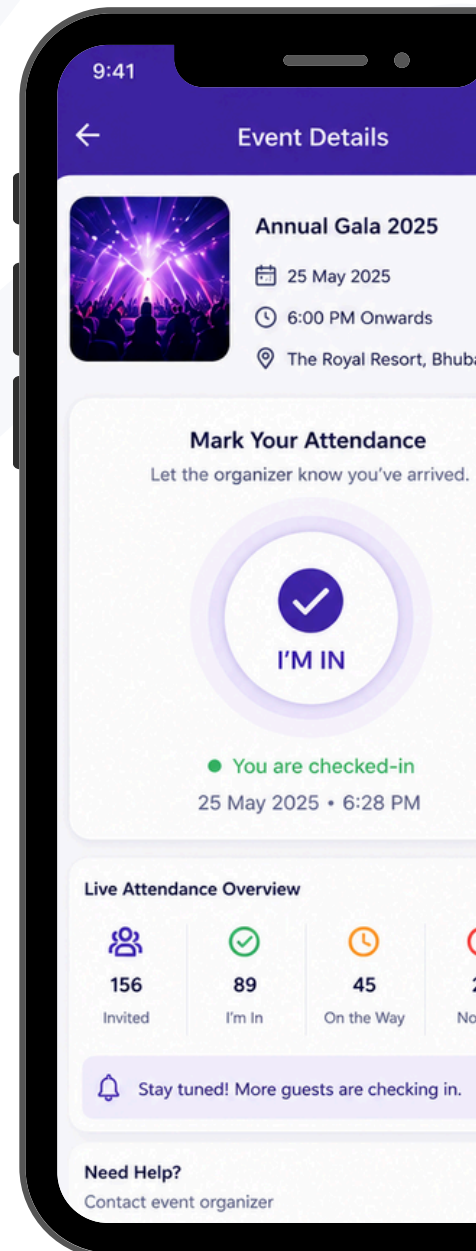

QR Technology: Digital Invitation & Contactless Check-In

Overview

Traditional event management often relies on phone calls, spreadsheets, and manual coordination, making it difficult to keep track of hundreds of guests during an event. Organizers frequently encounter challenges such as:

- Limited visibility into guest arrivals.
- Difficulty communicating with guests while they are travelling.
- Long queues during manual check-ins.
- Managing different guest groups such as VIPs and family members.
- Sharing event schedules and keeping guests informed.
- Last-minute coordination resulting in unnecessary delays and confusion.

These operational challenges can affect both the organizer's efficiency and the overall guest experience.

Our Solution

Utkal Labs developed a Smart Guest Management Platform that simplifies event coordination with real-time tools for organizers and guests.

1. Instant Attendance ("I'm In")

Guests confirm their arrival with a single tap, while organizers receive live attendance updates.

2. Live Event Chat

Built-in chat with live location sharing enables seamless communication and arrival coordination.

3. Real-Time Guest Tracking

An interactive map shows guests' approximate locations, refreshed every 10–15 minutes.

4. QR Code Check-In

Unique QR codes provide fast, secure, and contactless guest check-ins.

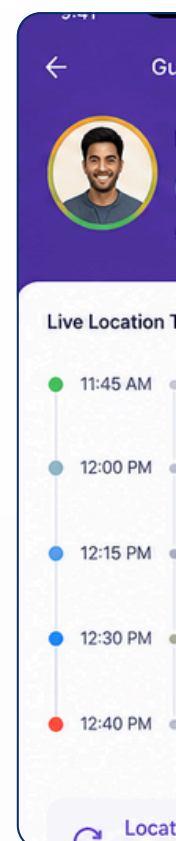

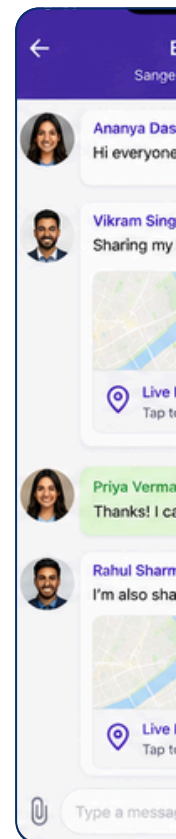

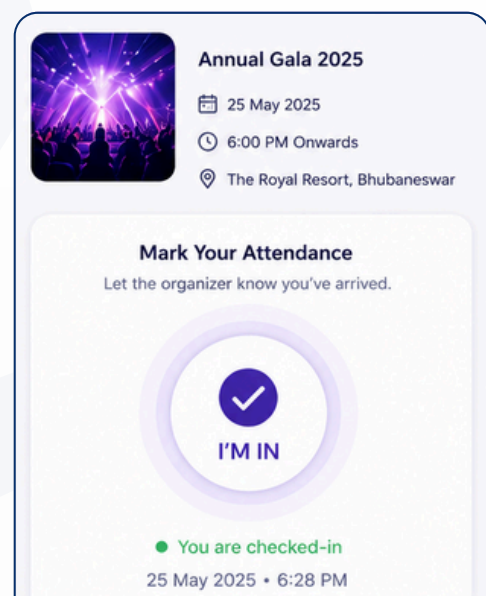

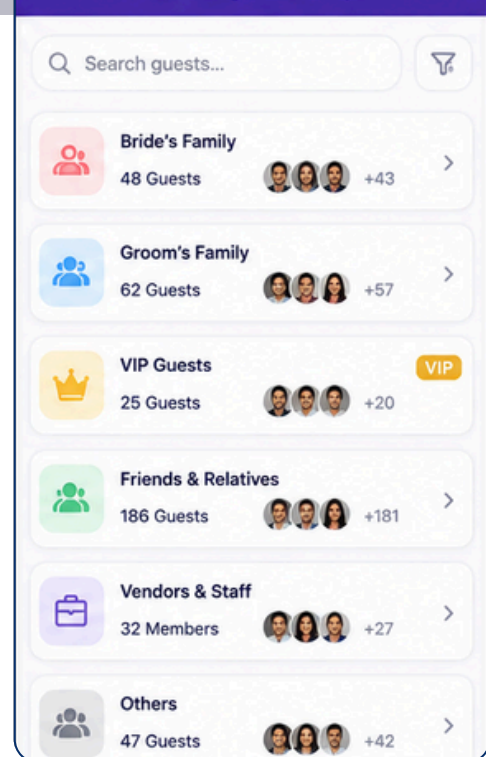

5. Guest Categories & VIP Management

Organize guests into groups like VIPs, family, or delegates for better hospitality and access control.

6. Event Schedule

Guests can view the complete event itinerary, including timings, venues, and important updates.

Business Impact

The Guest Management Platform helped event organizers transform traditional event coordination into a digital-first experience by delivering:

- Faster and more efficient guest check-ins.
- Real-time visibility into guest attendance and arrival status.
- Improved communication through integrated event chat.
- Better planning and coordination with live guest location updates.
- Personalized guest experiences through smart categorization.
- Reduced operational effort and improved event execution.
- Higher guest satisfaction through seamless digital interactions.
